

Same feature plane, more information for Isomap: replicate 6

Top: Isomap uses two features | Bottom: Isomap uses four features | X and Y remain features 1 and 2

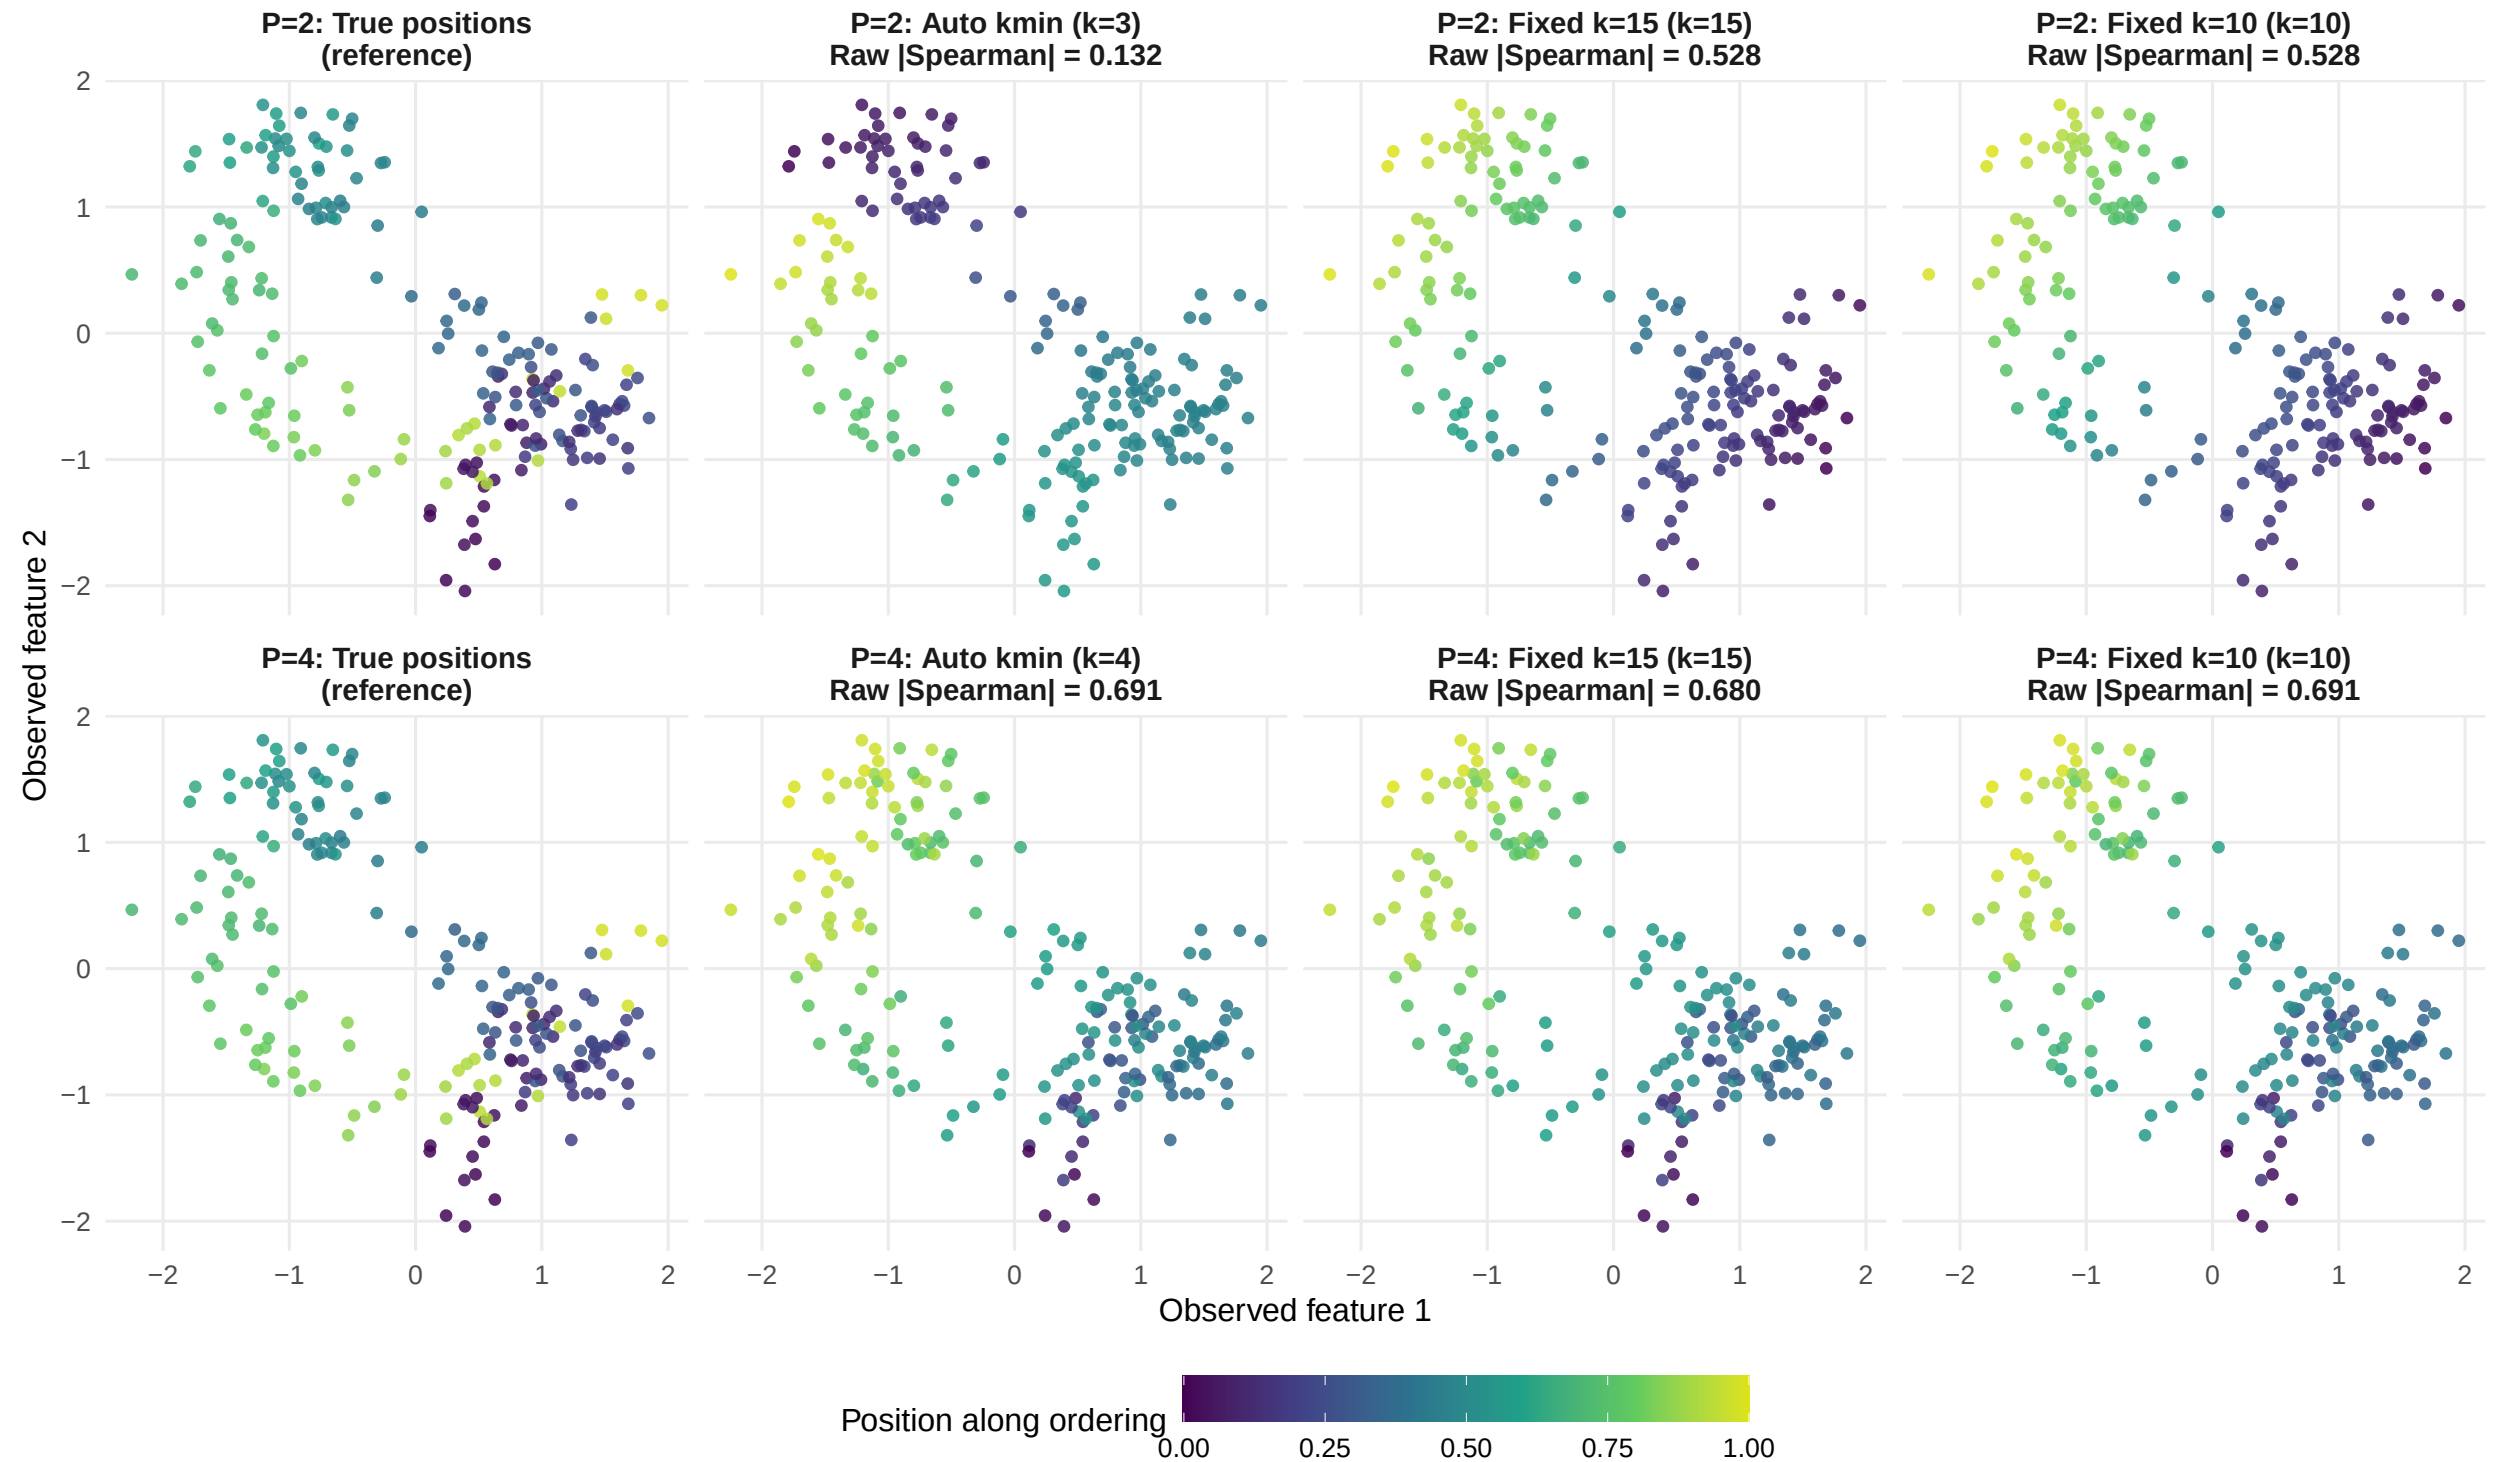

Figure 2. Identical observed feature-1/feature-2 scatter in all eight panels. Colors show true positions or raw Isomap positions computed from the indicated total number of features, before MPCurve fitting. Only a global reflection makes signed rank correlation positive for display. All panels share axes and color limits. The case was chosen in the preceding P=2 diagnostic; no new case selection uses P=4 outcomes.
