

Feature scatterplot matrix: replicate 6, P=4
Lower triangle: noisy observations | Upper triangle: noiseless generating curves

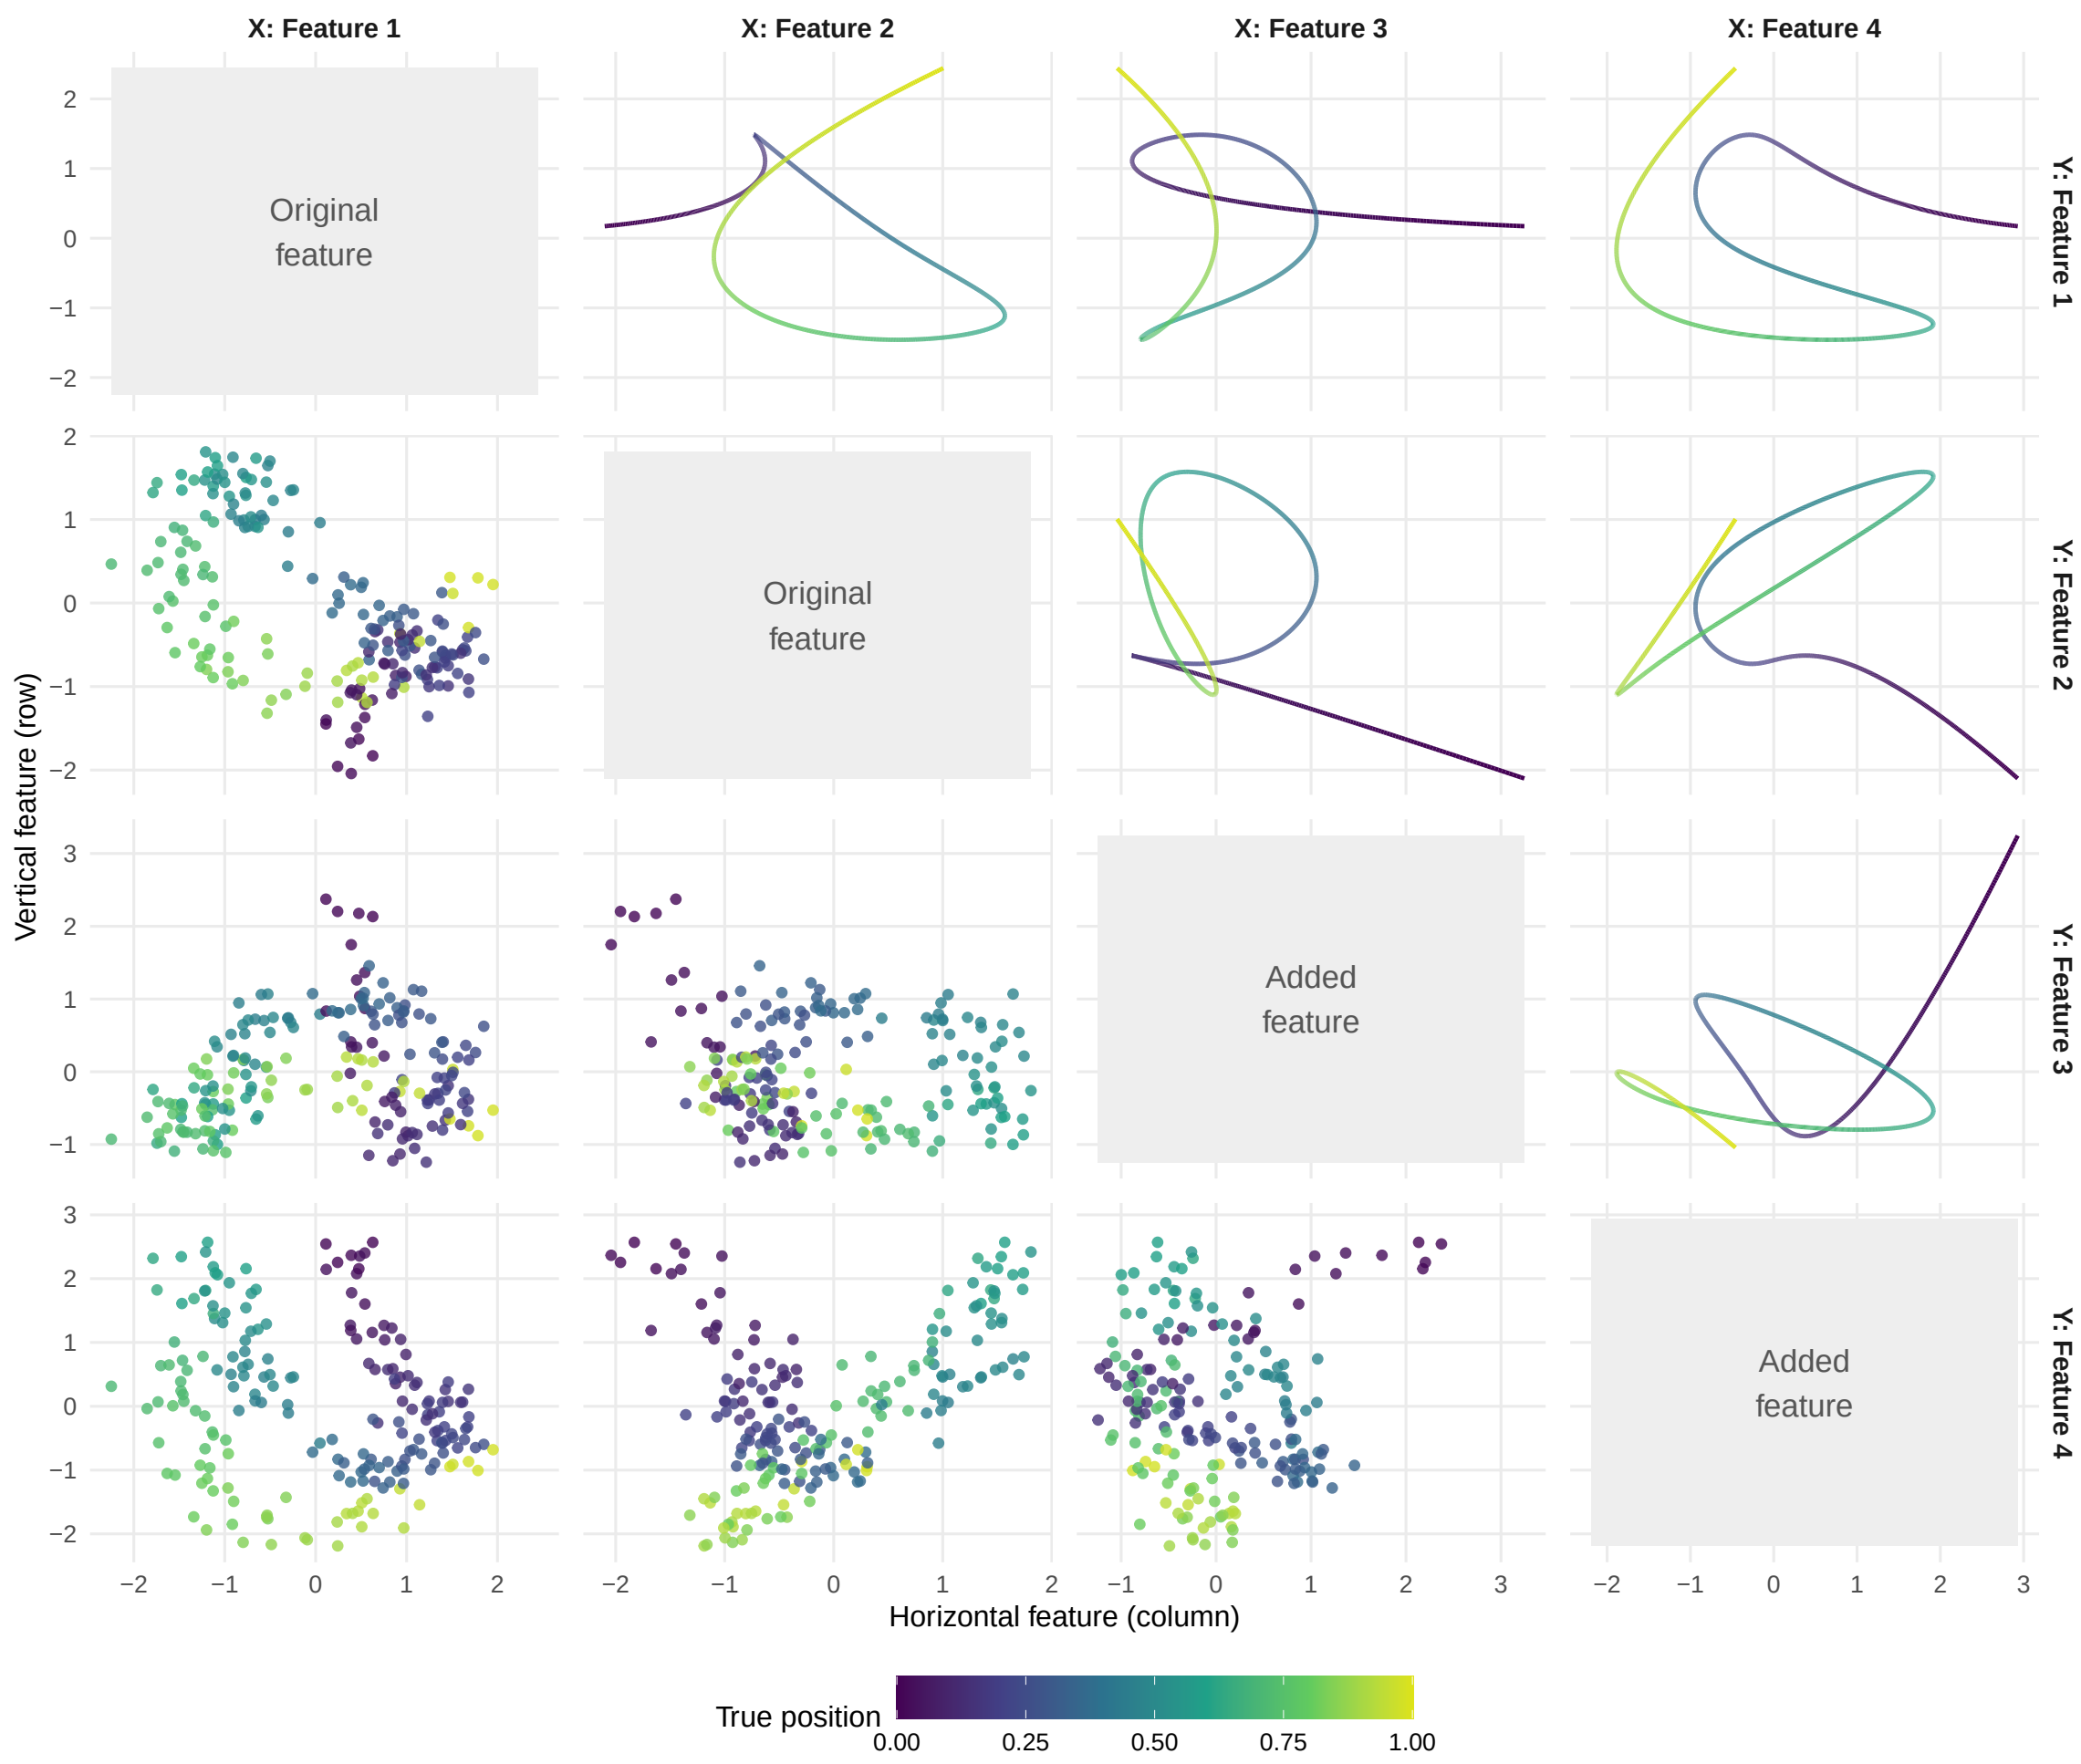

Figure 4. Scatterplot matrix of the four features in replicate 6 (N=200, M=1). Columns specify horizontal features and rows specify vertical features. Lower triangle: observed samples with Gaussian noise SD=0.25. Upper triangle: noiseless generating curves on a 2,001-point grid. Colors show true position along the trajectory. Features 1 and 2 are preserved from P=2; features 3 and 4 were added. Each column and row shares its feature-specific axis limits.
